

Zagorov, Vasil, Encheva, Marina. Digitalization of the Repertoire of Books from the Bulgarian Revival (1801-1878) – on the Tracks of a Scientific project. – In: Digital Library Perspectives. 2020. In Print.

### **Abstract**

This article is presenting the development and scientific results of the project Digitalization of the Repertoire of Books from the Bulgarian Revival (1801-1878), related to the development of the Data Base and Information Retrieval System (IRS) for the bibliography of the Bulgarian books from the National Revival period (1801–1878). After the observation of the existing printed bibliographies of this period, which differ in structure, quantity and content, the project team is embarking on the final steps to finishing the editing of the bibliography entries. The paper will focus on exact steps for constructing the interface and structure of the IRS. The purpose of the final product is to make a radical transformation in the methods whereby the Bulgarian national bibliography is presented and provide information for librarian and scientists. The project Digitalization of the Repertoire of Books from the Bulgarian Revival (1801–1878) is funded by The Bulgarian National Science Fund (BNSF).
